journal of physics

Volume 33, July–December 1989

CONTENTS

Mathematical Physics

Bivariate averaging and the Wigner distribution function
A K Rajagopal and S Teitler 347–358

General Relativity

Spin precession of a charged particle in a uniform magnetic field on a static space-time *K S Virbhadra and A R Prasanna* 449–454

Statistical Mechanics

Method of most probable distribution: New solutions and results
V J Menon and D C Agrawal 455–465

Experimental Techniques and Instrumentation

Number albedo measurements from stratified layers of iron, concrete and aluminium *A K Sinha and A Bhattacharjee* 493–503

A microprocessor based autoscanner for electromigration studies in thin films *M Dhanabalan, Y Syamasundara Rao and K V Reddy* 541–546

A PSD-based electronic system for AC response studies of superionic conductors *P Balaya and C S Sunandana* 627–638

Particle Physics

An analysis of the mass formulae for *S*- and *P*- wave mesons
V Gupta and R Kögerler 255–269

Variational calculation of the sine-Gordon effective potential
V C Kuriakose 271–276

Confinement of tensor gluons—a classical approach
S Biswas and S Kumar 277–287

Confinement model for quarks *S Biswas and S Kumar* 289–296

An improved approximate solution of Altarelli-Parisi equations
D K Choudhury and A Saikia 359–364

Higgs bosons in E_6 and intermediate mass scales
T Vasantha Rao and Pratibha Nuthakki 467–479

On the Higgs feature of gravity *G Sardanashvily and O Zakharov* 547–553

Bounds on non-leading QCD effects in a quark model for inclusive reactions *D K Choudhury and R C Goswami* 555–571

Interpretation of the recent Kolar events
A S Joshipura, G Rajasekaran, V Gupta and K V L Sarma 639–650

An extended technicolour model for grand unification
C Premkumar Yesudian 651–658

Nuclear Physics

Giant resonances in ^{90}Zr and ^{116}Sn
S Kailas, A Saxena, P P Singh, Q Chen, D L Friesel, P Schwandt and E J Stephenson 365–379

Phase-function method for velocity-dependent potentials
G C Sett and B Talukdar 381–389

A new representation of the heavy ion Coulomb potential
P Basu, P Bhattacharya and M L Chatterjee 481–492

Parity mixing in deformed Hartree-Fock approximation in $A \approx 70$ mass region *C R Praharaj* 573–579

Molecular Physics

Overtone spectra of styrene and polystyrene in the visible and near infrared regions
T M Abdul Rasheed, K P B Moosad, V P N Nampoori and K Sathianandan 391–395

Spectroscopy

Total attenuation cross-sections of fluorescent X-rays of Zr, Sn, Ba, Au, Pb, Th and U in elements $6 \leqslant Z \leqslant 82$
N Singh, H S Aulakh, K L Allawadhi and B S Sood 505–511

Infrared and Raman studies on neodymium pentaphosphate and metaphosphates
V Ramakrishnan, J Kumar, M Thirumavalavan, F D Gnanam and P Ramaswamy 659–666

Electromagnetic Theory

On the non-radiating motion of a charged particle *N D Sen Gupta* 581–586

Soil Physics

Heat conduction and moisture migration in unsaturated soils under temperature gradients
Ashok K Singh, Ramvir Singh and D R Chaudhary 587–594

Plasma Physics

Ignition and increase in Pease limit on current in an ohmically heated high density *Z*-pinch *A Shyam, V Chitra and M Srinivasan* 397–403

Crystallography

Non-periodic tilings in 2-dimensions with 4,6,8,10 and 12-fold symmetries
V Sasisekharan, S Baranidharan, V S K Balagurusamy, A Srinivasan and E S R Gopal 405–420

Condensed Matter Physics

Thermomagnetic history effects in niobium and its implication for H_{c1} in high T_c superconductors
A K Grover, P L Paulose, P Chaddah and G Ravikumar 297–313

Synergism in electron gas in crossed fields. II degenerate 3DEG-Hall conductance *R Pratap and J Sreekumar* 421–447

Magnetic properties of Zr doped Y_9Co_7
R Ranganathan, J L Tholence and B V Sarkissian 513–519

Magnetization curves of hard superconductor samples with non-zero demagnetization factor *K V Bhagwat and P Chaddah* 521–540

Phonon density of states of tetracyanoethylene from coherent inelastic neutron scattering at Dhruva reactor
S L Chaplot, R Mukhopadhyay, R Vijayaraghavan, A S Deshpande and K R Rao 595–602

Soft mode dynamics of perovskite type crystals
N S Panwar, T C Upadhyay and B S Semwal 603–614

Phase transformation and electrical resistivity of tetracyanoethylene under pressure
P Ch Sahu, K Govinda Rajan, Mohammad Yousuf, R Mukhopadhyay, S L Chaplot and K R Rao 667–672

Electronic structure of La_2CuO_4
G Subramoniam, R S Rao, S Mathi Jaya and R Asokamani 673–676

Quantitative Auger electron spectroscopy analysis of binary alloys with separate matrix correction factors for bulk and surface *N C Jain* 677–684

Electron paramagnetic resonance and thermally stimulated luminescence studies of uranyl doped calcium sulphate
T K Seshagiri, V Natarajan, A G I Dalvi and M D Sastry 685–696

Solitons and their resonances on two-dimensional superfluid films
J Sreekumar and V M Nandakumaran 697–704

Composition dependence of the energy gap and thermal diffusivity in bulk As-Se glasses *K N Madhusoodanan and Jacob Philip* 705–712

^{1}H Relaxation study in $(NH_4)_2SbF_5$
B Bandyopadhyay, A Ghoshray, R Mukhopadhyay and R M Kadam 713–720

Review Paper

Analytic structure of dynamical systems *M Tabor* 315–330

Rapid Communications

Effect of heat treatment of Ag/Y-Ba-Cu-O contact resistance
Neeraj Khare, S K Arora, G S N Reddy, V S Tomar, V N Ojha, N D Kataria and A K Gupta L333–L338

A theory of cold nuclear fusion in deuterium-loaded palladium
Swapan K Ghosh, H K Sadhukhan and Asish K Dhara L339–L342

The role of combined electron-deuteron screening in *d-d* fusion in metals *S N Vaidya and Y S Mayya* L343–L346

Low concentration of the superconducting phase and thermoelectric power in 90 K superconductors *S R Jha, Y S Reddy and R G Sharma* L615–L619

Photoacoustic detection of two photon absorption in formaldehyed using pulsed dye laser
A V Ravi Kumar, G Padmaja, V P N Nampoori and C P G Vallabhan L621–L626

Theme issue on Nuclear Fission

Discovery of nuclear fission in Berlin in 1938 *D Hilscher* 1–12

Nuclear fission phenomenon—At a glance *S S Kapoor* 13–20

Shell structure in deformed nuclei and nuclear fission *V M Strutinsky* 21–32

The topography of the nuclear fission barrier *J E Lynn* 33–84

Light-charged particle emission in fission
A K Sinha, D M Nadkarni and G K Mehta 85–107

Recent radiochemical studies of the fission process *Satya Prakash* 109–131

Nucleon exchange mechanism of mass asymmetry relaxation in fission and other binary nuclear reactions *V S Ramamurthy and R Ramanna* 133–144

Saddle-point shapes and fission barriers of rotating nuclei *F Plasil* 145–149

Fragment angular distributions in fission and fission-like reactions *S S Kapoor and V S Ramamurthy* 161–174

Pre-scission particle and gamma-ray emission in heavy-ion-induced fission *J O Newton* 175–208

The categorical space of fission *Luciano G Moretto and Gordon J Wozniak* 209–253
